Winter is Not Over Yet!

This morning I was watching the news and observed that Interstate 8 east of San Diego was closed for 30 miles due to snow and ice conditions! It has been a wild winter season so far with snow in Atlanta to record cold temperatures across the Midwest. Now is the time to reinforce to your drivers that they cannot let up their guard and must continue to practice sound winter driving techniques. Please review the following tips with your drivers:

Reduce your speed!

- When it snows, use your head not your feet. Slow down for wet, snowy, or icy conditions; when visibility is poor; or when conditions are changing or unpredictable.
- Slow down when approaching intersections, off-ramps, bridges or shady spots. These are all candidates for developing black ice — a thin coating of clear ice that can form on the pavement surface that may be difficult to see.
- Avoid excessive actions while steering, braking or accelerating to lessen the chances of losing control of the vehicle.
- Space out! Leave plenty of room between your truck and others. It takes more time and distance to stop your truck in adverse weather conditions, so use your brakes carefully. Brake early, brake slowly, brake correctly, and *never* slam on the brakes.
- No Cruising! Avoid using cruise control in winter driving conditions. You need to be in control of your speed based on road conditions — do not let the cruise control make a bad decision for you.
- Remember: Winter conditions call for different driving tactics. Ice and snow, take it slow—slower speed, slower acceleration, slower steering, and slower braking.

Safe Travel Around Snow Plows

- Don't crowd the plow. Snowplows plow far and wide—sometimes very wide. The front plow extends several feet in front of the truck and may cross the centerline and shoulders during plowing operations. Plows also turn and exit the road frequently.
- Don't tailgate or stop too close behind snowplows. Snowplows are usually spreading deicing materials from the back of the truck and those materials can damage vehicle paint. Plows also may need to stop or take evasive action to avoid stranded vehicles. If you find yourself behind a snowplow, stay behind it or use caution when passing. The road behind a snowplow will be safer to drive on.
- On multiple lane roads, watch for snowplows operating in either lane.
- Snowplows travel much slower than the posted speeds while removing snow and ice from the roads. When you spot a plow, allow plenty of time to slow down.
- A snowplow operator's field of vision is restricted. You may see them but they may not see you.

Be Prepared!

- Before leaving on your route or trip, find out about the driving conditions. Safe drivers know the weather, and they know their limits. If the weather is bad, remember, ice and snow, take it slow.
- Before venturing out onto snowy roadways, make sure you've cleared the snow off all of your truck's windows and lights, including brake lights and turn signals. Make sure you can see and be seen. Always buckle up, and remember, when driving in ice and snow, take it slow.

NEWS

The Federal Motor Carrier Safety Administration has extended its public commenting period for its interim hours-of-service rule for 30 days.

The comment period was to close today, but in a letter dated Wednesday to Advocates for Highway and Auto Safety, FMCSA Administrator John Hill said he would keep the docket open through March 17.

- Give yourself extra time to reach your destination safely. It is not worth putting yourself and others in a dangerous situation, just to be on time.
- Winter conditions can be taxing on your truck. A thorough Pre-Trip Inspection is especially important in inclement weather. A breakdown is bad on a good day, and can be dangerous on a bad weather day.

Driving Maneuvers

- Stopping on snow and ice without skidding requires extra time and distance. If you have anti-lock brakes, press the pedal down firmly and hold it. If you do not have anti-lock brakes, gently pump the pedal. Either way, give yourself plenty of room to stop.
- When you are driving on snow, accelerate gradually.
- When you are driving on snow, ice or wet roads, avoid abrupt steering maneuvers.
- When you are driving on snow, ice or wet roads, merge slowly, since sudden movements can cause your vehicle to slide.
- When driving in adverse road conditions, look farther ahead in traffic than you normally do. Actions by other vehicles will alert you to problems more quickly.
