

HOW MUCH FUEL IS BURNED IN AN IDLE HOUR

Q: How much fuel is being burned during an idle hour?

A: [Industry estimates suggest that an hour of idle burns 0.75 gallons of fuel.](#) If you have a large fleet, this can add up to thousands of gallons of unproductive fuel burn each week.

If a driver is utilizing the cruise pad to override the Idle Shutdown Timer, this process raises the RPMs the vehicle is idling at. This leads to an estimated 1 gallon per hour of unproductive fuel burn and will show up on the scorecard as PTO Hours.
